DURABESTOS SHEETS

For roofing and siding industrial buildings use **WUNDERLICH** **Deep Corrugated Durabestos**

This new scientifically designed Wunderlich product is composed of Asbestos Fibre and Portland Cement, properly mixed and united. The sheets present a pleasing grey white appearance and possess unique physical properties. They are:

STRONG, for the large (5.75") corrugations impart the highest structural strength and the maximum rigidity of which the component materials are capable.

FIRE-RESISTING, WEATHER AND CORROSION PROOF, for the material cannot burn, will remain unaffected by the elements, and will not rot or rust; in addition, **salt air** does not affect it.

CORRUGATED DURABESTOS minimises condensation, providing conditions under the roof are normal, also the transmission of sound from hail or rain and the heat from the sun, and is cooler than any metal roof.

It is economical in use, for the large corrugations permit of greater purlin spacing with resultant structural savings; is permanently durable and does not require painting.

for permanence
